

Enterprise Workflow & Analytics Platform

Supplier Proposal - Orbit Digital

Procurement request: Design, implementation, integration, security, and support of an enterprise workflow and analytics platform for a fictional multi-site organization.

Proposal status: Final fictional response for classroom demonstration.

Submission date: 2026-08-22

Supplier experience rating: 10 / 10 (provided by procurement for demonstration)

Supplier synthetic profile: Strong experience and references; vague integration plan; medium pricing.

1. Executive Summary

Orbit Digital presents a mature supplier profile with extensive references and a strong support organization. The commercial offer is mid-range. However, the integration section remains high-level and provides fewer specifics on APIs, interfaces, technical dependencies, and integration testing than the other proposals.

2. Understanding of the Requirement

The procurement requires a secure, scalable platform that can support enterprise workflows, connect to existing business systems, provide auditable operations, and be deployed with a defined implementation plan. The selected supplier is expected to provide implementation services, training, operational support, and sufficient security/compliance controls.

Our response addresses solution architecture, implementation approach, timeline, pricing, security, risk controls, support, and relevant experience.

3. Proposed Solution and Implementation Approach

Proposed Solution

- Enterprise workflow platform with configurable modules and centralized administration.
- Supports API integration and file-based exchange with external systems; detailed interface catalog to be finalized during discovery.
- Scalability is described as "enterprise scale" without a quantified concurrency target.
- High availability is supported through redundant application services.

Implementation Approach

- 13-week target schedule across discovery, configuration, integration, testing, training, and go-live.
- Team of 7 named roles, with specialist resources available on demand.
- Milestones are listed, but detailed entry/exit criteria are limited.
- Risk management focuses on steering escalation and weekly status reporting rather than a detailed risk register.

4. Timeline, Team Structure, and Milestones

Milestone	Target	Primary output
1. Discovery	Weeks 1-2	Requirements and interface inventory
2. Configuration	Weeks 3-6	Configured platform
3. Integration	Weeks 6-9	Standard integrations
4. Testing	Weeks 10-11	UAT and remediation
5. Training	Week 12	Administrator/user training
6. Go-live	Week 13	Production launch

Team structure

Core team: program manager, solution architect, four consultants, QA lead; specialist security and integration resources available on demand.

Risk controls

- Integration scope and interface catalog are not fully defined at proposal stage.
- Some staffing is shared rather than fully dedicated.
- Non-standard integrations may increase cost and schedule.

5. Commercial Proposal

Pricing is expressed in USD for demonstration purposes. The price table below is intentionally designed to create meaningful commercial differences across the synthetic supplier set.

Item	Price	Assumptions
Implementation services	\$285,000	Estimated fixed fee subject to confirmed interfaces.
Year 1 licensing	\$155,000	Enterprise license; user volumes to be confirmed.
Integration package	\$80,000	Covers standard interface patterns.
Year 1 support	\$70,000	24x7 support; standard priority SLA.
Total Year 1	\$590,000	Potential change requests for non-standard integrations.

6. Security, Compliance, and Risk Controls

- ISO 27001 certification is stated for the operating organization.
- Mentions encryption, role-based access and audit logs, but gives fewer implementation details than Apex Systems or NexaWorks.
- Privacy and retention policies are summarized without detailed control mapping.
- Annual security testing is stated, with detailed findings shared under NDA in a real engagement.

7. Support Model, Relevant Experience, and References

- 24x7 enterprise support, named service manager, and regional escalation coverage.
- Four references are summarized across banking, utilities, and logistics.
- References include repeat customers and a stated 97% renewal rate, but no customer names are disclosed in this fictional proposal.

8. Assumptions and Exclusions

- Pricing assumes interface inventory is finalized during discovery.
- Non-standard integration patterns may require additional effort.
- User volumes above the stated enterprise license assumptions may change subscription pricing.

9. Evidence Quality Note

Evidence quality: strong for experience/support; moderate for technical integration. Several architecture details are intentionally left high-level.

End of proposal
